

Customer Experience: Laboratory

SITE:

Berner Oy
Helsinki

PROBLEM:

Berner produces a variety of chemistry products in their factory at Heinävesi and has product development in Helsinki. Analysis laboratory in Helsinki also functions as a showroom for laboratory products. Since there is a lot of equipment and appliances in the laboratory, maintaining high level of surface hygiene is more challenging.

SOLUTION:

WiSDOM AiR LiNE photon disinfection luminaires were installed below the wall cabinets to disinfect the counter tops. Rest of the room is disinfected with WiSDOM AiR iDEA panel luminaire in the recessed ceiling and with the WiSDOM AiR 650 installed on the end wall with the tilting brackets. Versatile installation of photon disinfection luminaires minimises shadow areas and ensures comprehensive disinfection of the whole laboratory. Lights are controlled with a presence detector, so the room is always automatically disinfected when unoccupied.

BENEFITS:

"In our laboratory facilities our customers get to see and test the laboratory equipment we use and also sell. There are lots of visitors every day, so it is important for us to ensure a high level of hygiene in the premises. Photon disinfection has significantly improved our surface hygiene."

– Suvi Kemmo, Sales Director (laboratories)
