

Customer Experience: Dental Clinic

SITE:

**Dental Clinic Tiina Yrjö-
Koskinen Ltd.**
Riihimäki

PROBLEM:

The clinic conducts a variety of operations and sees a large number of customers daily. This always involves a risk of contamination, and the clinic thus invests in hygiene. In addition to improved surface hygiene, better indoor air quality was also on the wish list.

SOLUTION:

Existing fluorescent tubes in the equipment service area and treatment room were replaced with white ANTIBAC AiRTUBE LED tubes. Blue WiSDOM AiR photon disinfection luminaires were mounted on the ceiling for automatic night-time disinfection. All surfaces were treated with catalytic coating to boost the disinfection effect of the system and improve air quality by destroying harmful airborne substances, such as VOCs.

BENEFITS:

“The photon disinfection system gives us better surface hygiene, improving occupational safety and raising employees’ energy levels. It’s important to us to minimise the risk of infection to particularly vulnerable patients.”

-Tiina Yrjö-Koskinen, dentist
