

## Customer Experience: Veterinary Clinic

### SITE:

**Veterinary clinic EHYT**  
Halikko, Salo

### PROBLEM:

The clinic treats a large number of animals on a daily basis, which involves considerable hygienic risk. The clinic has seven treatment rooms, an imaging room, an operating room with prep and maintenance facilities, recovery rooms and two dental care facilities. Cleaning these premises takes a lot of time and energy. Other automated disinfection systems (such as UV lights or sterilization with hydrogen peroxide) were not an option, because only a method that was completely risk-free to staff was acceptable.

### SOLUTION:

A catalytic coating was applied to all surfaces in the recovery cages and the treatment rooms. Equipment is disinfected with a WiSDOM AiR MOBILE unit that can easily be moved on its caster wheels to whichever location is needed. Blue disinfection lights are always on when a space is not in use.

### BENEFITS:

“Surface hygiene is so easy to maintain with the blue lights in place! We had tried in vain to clean the traction mat on the treatment table several times, yet just after one night with the lights the blood stains could simply be wiped off the stitching! The result is so positive we intend to have our other facilities treated as well, such as the operating room and the dental care facilities.”

– Jouni Niemi, Head of Development and Veterinarian
