

Customer Experience: Assisted-living facility

SITE:

Salon Palvelutalosaäitiö sr
Salo

PROBLEM:

At lunchtime the facility serves not only residents but visitors as well. The hygiene of the public spaces is therefore especially important for ensuring the wellbeing of the elderly occupants.

SOLUTION:

Conventional fluorescent tubes over the food service and salad counters were replaced with antibacterial ANTiBAC AiRTUBE LED tubes, which emit a pure white light. The antimicrobial efficacy of the lights is boosted with the catalytic coating applied on counters and other critical contact surfaces such as kitchen countertops and door handles.

BENEFITS:

“These measures enable us to improve the wellbeing of our customers and residents alike, as well as the general hygiene of our facilities. The pure white lights provide just the right lighting for the service counter, bringing out the true colours of the food. The catalytic coating prevents the spread of bacteria on contact surfaces, counters and door handles.”

- Liisa Mäkinen, CEO
