ja aikuisopisto**

PROBLEM:

Helsinki Vocational College and Adult Institute educates laboratory technicians for future employment in a wide range of jobs. Institute aims to offer the best possible environment for students to practice their skills in well equipped laboratories. With a big variety of well utilised spaces and equipment, maintaining a high level of hygiene requires attention.

SOLUTION:

WiSDOM AiR photon disinfection luminaires were mounted to the ceiling of the laboratory. They disinfect the surfaces of the room during night time, when it's unoccupied. WiSDOM DS surface disinfection box was purchased for disinfecting the large variety of small lab equipment being used. Almost any object can easily and quickly be disinfected with it.

BENEFITS:

"Blue lights ensure a high level of surface hygiene in our laboratory. It's good to know that one can safely enter the room, even if the disinfecting light was switched on. With WiSDOM DS surface disinfection box we can quickly disinfect electronic pipettes and pipette tips, for example. LED Tailor's photon disinfection products are especially suitable for students to use, since they are safe and very easy to use."

- Ritva Mikkonen, Teacher of Laboratory Studies
