

## Customer Experience: Veterinary clinic

**SITE:**  
**Veterinary clinic Veterica**  
Kirkkonummi

PIENELÄINKLINIKKA  
**VETERICA**

**PROBLEM:**

On a daily basis there are many kinds of animals receiving treatment at Veterica, by both appointment and emergency duty. In addition to first aid and basic healthcare, also surgical operations and dental surgery are conducted. Inside the clinic premises there are lots of different equipment and surfaces, so maintaining a high level of hygiene requires accuracy.

**SOLUTION:**

Old fluorescent tubes were replaced with antimicrobial white ANTiBAC AiRTUBE LED-tubes. The easily movable WiSDOM AiR MOBILE photon disinfection luminaire is used for efficient disinfection of rooms. The actual effect of photon disinfection was evaluated in real environment by taking microbial samples from different room surfaces before and after using the blue light. These contact plate tests proved how photon disinfection is effectively destroying microbes on different surface materials.

**BENEFITS:**

”Antimicrobial white lights give our premises a fresh look. Convenient size of the mobile blue disinfection luminaire makes it easy to be moved around from one room to another. That’s why it’s almost always in use somewhere in the background, so improving the level of surface hygiene is indeed effortless.”  
- Erica Lindell, Veterinarian
