VETRO SPACE™

PROBLEM:

Vetrospace manufactures versatile and adaptive space solutions providing a combination of sound reduction, glass surfaces and efficient use of space. Clients are offered the very best conditions for air quality and hygiene. It was decided that lighting solutions should be tailored to each space as the design finish of the products was to be retained.

SOLUTION:

LED Tailor designed luminaires with the style and features to suit the CleanSpace range of booths. Both white general lighting and blue disinfection lighting that destroys bacteria, mold and yeasts, are in the same luminaire. In addition to LED Tailor lighting, the HealthSpace range of booths utilizes catalytic coating which is used to boost the effects of the lights to also destroy viruses and harmful VOCs for example.

Vetrospace commissioned an external laboratory for microbial testing, where surface microbes were found to have been reduced by 92% thanks to LED Tailor's photon disinfection luminaires.

BENEFITS:

"Our cooperation has run very smoothly and the microbial test results exceeded my expectations. By utilizing LED Tailor's technology, new business opportunities have opened up to us."

-Jouko Urpolahti, CEO
